Problem 1

Noise-free: $m(x_*) = 0 = \mu_*$

$$\begin{aligned}
K &= exp\big(-\frac{1}{2}(x-x')^T(x-x')\big) \\
&= exp\big(-\frac{1}{2}\begin{pmatrix} x_1 - x_1 & x_1 - x_2 \\ x_2 - x_1 & x_2 - x_2 \end{pmatrix}^T \begin{pmatrix} x_1 - x_1 & x_1 - x_2 \\ x_2 - x_1 & x_2 - x_2 \end{pmatrix}\big) \\
&= exp\big(-\frac{1}{2}\begin{pmatrix} 0 & 0 & -0.5 & -1 \\ 0.5 & 1 & 0 & 0 \end{pmatrix}^T \begin{pmatrix} 0 & 0 & -0.5 & -1 \\ 0.5 & 1 & 0 & 0 \end{pmatrix}\big) \\
&= exp\big(-\frac{1}{2}\begin{pmatrix} \begin{matrix} 0.25 & 0.5 \\ 0.5 & 1 \end{matrix} & 0 \\ 0 & \begin{matrix} 0.25 & 0.5 \\ 0.5 & 1 \end{matrix} \end{pmatrix}\big) \\
&= \begin{pmatrix} \begin{matrix} 0.88 & 0.78 \\ 0.78 & 0.61 \end{matrix} & 1 \\ 1 & \begin{matrix} 0.88 & 0.78 \\ 0.78 & 0.61 \end{matrix} \end{pmatrix}
\end{aligned}$$

$$\begin{aligned}
K_* &= exp\big(-\frac{1}{2}\begin{pmatrix} x_1 - x_* \\ x_2 - x_* \end{pmatrix}^T \begin{pmatrix} x_1 - x_* \\ x_2 - x_* \end{pmatrix}\big) \\
&= exp\big(-\frac{1}{2}\begin{pmatrix} -0.5 & 0 \\ 0 & 1 \end{pmatrix}^T \begin{pmatrix} -0.5 & 0 \\ 0 & 1 \end{pmatrix}\big) \\
&= exp\big(-\frac{1}{2}\begin{pmatrix} 0.25 & 0 \\ 0 & 1 \end{pmatrix}\big) \\
&= \begin{pmatrix} 0.88 & 1 \\ 1 & 0.61 \end{pmatrix} = K_*^T
\end{aligned}$$

$$\begin{aligned}
K_{**} &= exp(-\frac{1}{2}(x_* - x_*)^T(x_* - x_*)) \\
&= exp(0) = 1
\end{aligned}$$

Therefore

$$f_{jt} = \begin{pmatrix} y_1 \\ y_2 \\ f(x_*) \end{pmatrix} \sim \mathcal{N}\Big(0, \begin{bmatrix} K & K_* \\ K_*^T & K_{**} \end{bmatrix}\Big) = \mathcal{N}\Bigg(0, \begin{pmatrix} 0.88 & 0.78 & 1 & 1 & 0.88 & 1 \\ 0.78 & 0.61 & 1 & 1 & 1 & 0.61 \\ 1 & 1 & 0.88 & 0.78 & 0.88 & 1 \\ 1 & 1 & 0.78 & 0.61 & 1 & 0.61 \\ 0.88 & 1 & 0.88 & 1 & 1 & 1 \\ 1 & 0.61 & 1 & 0.61 & 1 & 1 \end{pmatrix}\Bigg)$$

Problem 2

?

Problem 3

The joint distribution in the noisy case is given by

$$\begin{bmatrix} \boldsymbol{y} \\ f_* \end{bmatrix} \sim \mathcal{N}\Big(\begin{bmatrix} \mu \\ \mu_* \end{bmatrix}, \begin{bmatrix} \boldsymbol{K} + \sigma_n^2 \boldsymbol{I} & \boldsymbol{K}_* \\ \boldsymbol{K}_*^T & \boldsymbol{K}_{**} \end{bmatrix}\Big)$$

which in our case evaluates to

$$\mathcal{N}\Bigg(0, \begin{pmatrix} 0.88 + \sigma_1^2 & 0.78 & 1 & 1 & 0.88 & 1 \\ 0.78 & 0.61 + \sigma_2^2 & 1 & 1 & 1 & 0.61 \\ 1 & 1 & 0.88 + \sigma_1^2 & 0.78 & 0.88 & 1 \\ 1 & 1 & 0.78 & 0.61 + \sigma_2^2 & 1 & 0.61 \\ 0.88 & 1 & 0.88 & 1 & 1 & 1 \\ 1 & 0.61 & 1 & 0.61 & 1 & 1 \end{pmatrix}\Bigg)$$
